

Vehicle Weighing Solutions build new partnership with body builder and specialist vehicle converter - Mackworth Vehicle Conversions

A customer of Mackworth Vehicle Conversions (body building and vehicle conversion specialists) has replaced existing onboard weighing equipment with award-winning VOPS2 overload protection system.

Mackworth Vehicle Conversions specialise in supplying companies of all sizes with hi-tech van conversion and body building solutions. The company has grown strong since the previous merging of two established vehicle conversion specialist companies, which has given them more than 40 years of industry experience, whilst providing van and body solutions throughout the UK. Some of their notable customers include Derbyshire Fire & Rescue Service, Eggleston Steel, and Great Places.

Vehicle Weighing Solutions has recently begun working with a large customer of Mackworth's and has replaced their existing overload protection system with Vehicle Weighing Solutions' VOPS2 to prevent the overloading of their vehicles. Mackworth Vehicle Conversions has been highly impressed with the efficiency of installation provided by Vehicle Weighing Solutions and their ability to meet the required needs of their customers. Impressed with the product, they have placed a further order of 6 VOPS2 systems.

Stephen Hughes, Electrical Team Leader at Mackworth Vehicle Conversions: "I recently visited VWS to look at an installation they were doing for us here at Mackworth and meet the team we would be working with in transition from our existing overload protection provider to VWS.

The installation of the VOPS2 System was very good and of a high standard. VWS as a company have a very knowledgeable and friendly team that are forward thinking and are capable of finding solutions to help deliver what the customer requires."

"The installation of the VOPS2 system was very good and of a high standard."

VOPS2 is an award-winning, sophisticated overload protection system that can be fitted to most types of vehicles and is carried out under ISO 9001:2008. VWS can retrofit, or work with body builders/truck manufacturers, to install VOPS2 onto vehicles.

The M350S indicator is a compact design which allows it to be neatly fitted into a radio DIN slot or it can be cab mounted. It consists of a bright, organic LED display and is easy to read. The indicator supplies the driver with accurate loading information wherever they may need it. A percentage of load on front and rear axles will be displayed on the monitor.

"a very knowledgeable and friendly team that are forward thinking"

Added Stephen: "Mackworth are happy to forge a new partnership going forward with VWS continuing on seamlessly from our existing provider to what looks to be an excellent new strong partnership."

Additional features of the VOPS2 overload protection system are high security, anti-tamper password operation and on-screen diagnostics. The display can also be provided in a water-proof mount if it is required for external use.

Trevor Evans, Operations Director, Vehicle Weighing Solutions: "It was a pleasure to meet Stephen at our installation centre in Chesterfield recently and to show him round our manufacturing facility. I look forward to a successful and growing partnership between the two companies."
